

# Fisher Sim

Employ technology to find a better fishing location

# Fisher Sim

A tool intended to be used by both by **people planning on fishing** and **wildlife management teams** to predict the amount of other people fishing and the current fish population. This is accomplished by utilizing modern crowd prediction methods that have been optimized for fishing scenarios. The simulation predicts how many fishers will be out each day, the current fish population, and gives recommendations about where and when to fish.

- Clear recommendations on where to fish to avoid over fished locations.
- Insight into quiet locations and times.
- Detailed graphs showing predicted time when each fish type will have a high population.

## Fishers Benefits:

- A better understanding of future fish population.
- Graphs that give Insight into where to allocate employees to manage and protect the parks environment.
- Better understanding of the needs and effects of socking lakes and ponds.

## Wild Life Management Benefits:
